Invited speakers and presenters include

David Luke Senior Lecturer at the University of Greenwich and one of the boldest researchers in this field, sometimes regarded as the rockstar of psychedelic research.

Bernardo Kastrup former CERN scientist, now a prolific author on philosophical issues concerning consciousness with several current publications in *Scientific American*.

Rupert Sheldrake former University of Cambridge biologist internationally acclaimed for his publications, including his TED Talk and his latest book *The Science Delusion*.

Caroline Watt Professor of parapsychology at The University of Edinburgh who presents the latest research from there.

Chris Roe Professor of Psychology at the University of Northampton, world leading in parapsychology research, and President of the Society for Psychical Research.

Adrian Parker-Reed Professor at Gothenburg University, researcher on altered states of consciousness, is the programme leader.

Research papers concern the current scientific investigations of phenomena that may have implications for our understanding of consciousness, such as: Near Death Experiences, Poltergeist experiences, Dream States, Mediumship, ESP, and Altered States of Consciousness.
